STATEMENT #2 UNCLASSIFIED

This document is subject to special export controls and each transmittal to foreign governments or foreign nations is made only with prior approval of

Control (MARNI)

Material Application Div.
W. P. AFB, Ohio

This data sheet was prepared by Battelle Memorial Institute under Contract F33615-67-C-1292. The contract was initiated under Project No. 7381, "Materials Application", Task No. 738106, "Design Information Development". The major objectives of this program are to evaluate newly developed structural materials of potential Air Force weapons-system interest and then to provide data-sheet-type presentations of mechanical data. The program was assigned to the Structural Materials Engineering Division at Battelle under the supervision of Mr. Walter S. Hyler. Project engineer was Mr. Omar Deel. The program was administered under the direction of the Air Force Materials Laboratory, Air Force Systems Command, Wright-Patterson Air Force Base, Ohio, by Mr. Marvin Knight, project engineer.

Notices

When Government drawings, specifications, or other data are used for any purpose other than in connection with a definitely related Government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the government may have formulated, furnished, or in any way supplied the said drawings, specifications, or other data, is not to be regarded by implication or otherwise as in any manner licensing the holder or any other person or corporation, or conveying any rights or permission to manufacture, use, or sell any patented invention that may be in any way related thereto.

Qualified requesters may obtain copies of this data sheet from the Defense Document Center, Washington, D. C.

This document is subject to special export controls and each transmittal to foreign governments or foreign nationals may be made only with the prior approval of the Materials Application Division (MAAM), AFML, Wright-Patterson Air Force Base, Ohio.

HM21A

△ This alloy is one of a fairly recently developed series of heat-treatable magnesium alloys containing thorium and manganese as hardeners. It is intended primarily for service from 500 to about 800 F, where it is superior from a strength standpoint to the other magnesium alloys available in sheet and plate form.

This alloy can be welded and need not be stress relieved to prevent stress corrosion. It should be noted that HM21A in the -T81 temper is strain-rate sensitive.

The nominal composition of HM21A is as follows: 2.0 thorium, 0.80 manganese, other impurities to total not more than 0.30.

Stress Corrosion

50% F _{ty} , 100 hr max	No cracks(f)	U	U	U
----------------------------------	--------------	---	---	---

Coefficient of Thermal Expansion(g)

12.2 x 10 ⁻⁶ in./in./F (68-212 F)
13.8 x 10 ⁻⁶ in./in./F (68-392 F)

Density(g) 0.064 lb/in.³

- (a) Data are average of triplicate tests conducted at Battelle under the subject's name. Unless otherwise indicated, fatigue, creep, and stress rupture values are from data curves generated using a minimum number of 10-14.
- (b) Single-shear shear type specimen, full thickness.
- (c) U, unavailable; NA, not applicable.
- (d) Single-edge-notched (3 x 12 in.) tensile specimen. No pop-in detected. Load-unload run as were made, and to the secant modulus method is ASTM STP 610 and proved to be correct to 1% error.
- (e) "R" represents the algebraic ratio of the minimum stress to the maximum stress in any cycle, based on S_{min}/S_{max}. "K_t" represents the Neuber-Peterson theoretical stress concentration factor.
- (f) Three-point bend test. Alternate immersion in 10% NaCl. No cracks observed.
- (g) Values from References (1) and (2).
